

You are here ●

With the new TWIG Discovery in your hands you know where you are and where you are going.

This compact mobile handset is your very own personal navigator. Locate roads, streets, places and people at the touch of a key – it really is that simple with the TWIG Discovery.

This state-of-the-art mobile phone combines GSM mobile telephony with GPS navigation capability in a user-friendly handset.

It's the world's first complete sat-nav system in your hands – not in your car.

navigate • communicate • locate •

The new TWIG Discovery is the first fully-integrated mobile communications and navigation system.

In-built navigation software allows you to make full use of GPS information services without the need of an additional GPS module. No more road maps or clunky in-car systems.

The broad range of Discovery functions includes the 'TWIG Finder', an easy way to locate fellow Discovery users. By identifying the number of a Discovery user and then pressing the special TWIG key, you can locate the exact position of the person you want to reach. It's that simple.

TWIG Navigation features:

- 2D and 3D maps
- Pictogram display with driving directions
- Zoom in/out functionality
- Map browser
- Compass arrow
- Distance to next turn
- Speed
- Estimated time of arrival
- Day and night display
- Voice prompted turn by turn guidance
- Walking/Cycling and driving modes
- Destination history
- Route selection interface
- Send map via MMS/E-mail

TWIG Finder features:

- Location requests to other TWIG users
- Position update on TWIG back end internet solution

TWIG Alert

- Call to predefined number
- SMS with position, direction and speed sent to predefined number
